PROJECT DESCRIPTION: Update of Feasibility Study & Preparation of Traffic Model for a New Bridge over Danube

The Romanian authorities have long-time been contemplating the construction of a bridge across the Danube in the Braila-Galati-Tulcea area (the "Project"), but no works have been initiated although several feasibility studies have been carried out and the interest of several partners has been verified.

European Bank for Reconstruction and Development (the "EBRD" or the "Bank") has been approached by the Braila County in Romania (the "Client") in order to seek funds for the update of the existing outdated feasibility study from 2003 and preparation of traffic model for the Project. The Bank now intends to engage a consulting company (the "Consultant") to update the feasibility study from 2003 and prepare a traffic model, to review the potential environmental and social aspects of the Project as well as the potential financing options for construction and maintenance of this bridge (the "Assignment"). Depending on the outcome of this Assignment EBRD may potentially consider participating in financing of this Project.

The objectives of the Assignment are to:

- (1) Update of the feasibility study regarding the potential bridge over Danube in the Braila/Galati/Tulcea region of Romania, including the development of a full traffic demand model in order to establish likely future demands for the bridge over Danube
- (2) In the feasibility study consider various future national, regional and local plans to enhance transport infrastructure
- (3) In the feasibility study analyse the possible financing schemes for the Project and
- (4) In the feasibility study include an update on the environmental and social impacts of the Project.
